Paper 5 Practical Test

May/June 2015

1 hour 15 minutes

Candidates answer on the Question Paper.

As listed in the Confidential Instructions. Additional Materials:

## READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name in the spaces at the top of the page.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

For Exam	iner's Use

The syllabus is approved for use in England, Wales and Northern Ireland as a Cambridge International Level 1/Level 2 Certificate.

This document consists of 10 printed pages and 2 blank pages.

1 In this experiment, you will determine the weight of a metre rule using a balancing method.

Carry out the following instructions, referring to Fig. 1.1.

Fig. 1.1

(a) Place the metre rule on the pivot. Place the load P on the metre rule at the 90.0 cm mark.

Keeping **P** at the 90.0 cm mark, adjust the position of the metre rule on the pivot so that the metre rule is as near as possible to being balanced.

(i) Write down the reading on the metre rule at the position of the pivot.

The pivot is at the ...... cm mark of the metre rule.

(ii) Record the distance x from the 90.0 cm mark to the pivot.

$$x = \dots [1]$$

(iii) Record the distance *y* from the pivot to the 50.0 cm mark.

(iv) Determine the weight W of the metre rule using the equation  $W = \frac{Px}{y}$ , where P = 2.0 N. P is the weight of load P.

$$W = \dots [1]$$

(b) Keep the pivot at the same position, as recorded in (a)(i).

Move load  ${\bf P}$  to the 95.0 cm mark. Place the load  ${\bf Q}$  on the metre rule and adjust its position so that the rule balances.

(i) On Fig. 1.2 mark, with a letter X, the approximate position of **Q**. [1]

**Fig. 1.2** 0625/51/M/J/15

	(ii)	Record the distance a from the 95.0 cm mark to the pivot.
		a =
(	(iii)	Record the distance <i>b</i> from <b>Q</b> to the pivot.
		b =
(	(iv)	Record the distance <i>c</i> from the 50.0cm mark to the pivot.
		C =
	(v)	Calculate the product $aP$ , where $P = 2.0 \text{N}$ . Include the unit.
		aP =
(	(vi)	Calculate the product $bQ$ , where $Q = 1.0 \text{N}$ . $Q$ is the weight of load $\mathbf{Q}$ .
		<i>bQ</i> =
(	vii)	Calculate the product $cW$ , using the value of $W$ determined in part (a)(iv).
		cW=
(c)	A st	[2] tudent suggests that $aP$ should be equal to $bQ + cW$ .
	Sta	te whether your results support the suggestion. Justify your answer by reference to the
	resi	ults.
	stat	ement
	just	ification
		[2]
(d)	Sug	gest one practical reason why it is difficult to obtain exact results with this experiment.
		[1]

2 In this experiment, you will investigate the cooling of water.

Carry out the following instructions referring to Fig. 2.1. You are provided with a beaker containing hot water and a thermometer.

Fig. 2.1

- (a) (i) Place the thermometer in the beaker of water. When the thermometer reading stops rising, measure the temperature  $\theta$  of the water and immediately start the stopclock. Record  $\theta$  in Table 2.1 at time t=0 s.
  - (ii) In Table 2.1, record the temperature of the water at 30 s intervals until you have a total of six values up to time t = 150 s.

Table 2.1

t/s	θ/°C

			[5]
(c) (	i)	State whether the rate of cooling of the water in the beaker increases, decreases stays approximately constant during the period of cooling.	or
		The rate of cooling of the water	[1]
(i	i)	Justify your statement by reference to the graph.	
			[1]
		[Total: 1	10]

3 In this experiment, you will investigate the resistance of lamp filaments in series and parallel circuits.

The circuit shown in Fig. 3.1 has been set up for you.

Fig. 3.1

(a) (i) Switch on. Measure and record the potential difference  $V_{\rm S}$  across the lamps and the current  $I_{\rm S}$  in the circuit. Switch off.

/ <sub>S</sub> =	 
/ <sub>S</sub> =	 [2]

(ii) Calculate the resistance  $R_{\rm S}$  of the lamp filaments using the equation  $R_{\rm S} = \frac{V_{\rm S}}{I_{\rm S}}$ .

		·	
(b)	The •	e circuit is to be rearranged so that the lamps are in parallel the ammeter will measure the total current the voltmeter will measure the potential diff	
	Dra	w a diagram of this circuit using standard cir	cuit symbols.
			[2]
			[2]
(c)	Rea	arrange the circuit as described in <b>(b)</b> .	
	(i)	Switch on. Measure and record the poter current $I_{\rm P}$ in the circuit. Switch off.	ntial difference $V_{\rm p}$ across the lamps and the
			V <sub>P</sub> =
			<i>I</i> <sub>P</sub> =
			[1]
	(ii)	Calculate the resistance $R_{\rm P}$ of the lamp file	elements using the equation $R_{\rm P} = \frac{V_{\rm P}}{I_{\rm P}}$ .
			D _

(iii) Calculate the ratio  $\frac{R_{\rm S}}{R_{\rm P}}$ .

$$\frac{R_{\rm S}}{R_{\rm P}} = \dots$$
[2]

(d)	A st	udent wishes to investigate whether the ratio $\frac{R_{\rm S}}{R_{\rm P}}$ for the two lamps is the same under all ditions.
	(i)	Suggest a variable that you could change in order to obtain further sets of readings. You are not asked to take any further readings.
	(ii)	Explain briefly how you would change this variable.
		[2]
		[Total: 10]

## **BLANK PAGE**

4 In this experiment, you will investigate the refraction of light passing through a transparent block.

Carry out the following instructions, referring to Fig. 4.1.

Fig. 4.1

- (a) Place the transparent block, largest face down, on the ray-trace sheet supplied. The block should be approximately in the middle of the paper. Draw the outline of the block **ABCD**.
- (b) Remove the block and draw a normal **NL** at the centre of side **AB**. Label the point **E** where the normal crosses **AB**. Label the point **M** where the normal crosses **CD**.
- (c) Draw a line **GH**, parallel to **AB** and 6.0 cm above **AB**. Label the point **J** where the normal crosses **GH**.
- (d) Draw a line, starting at **E**, to the left of the normal and at an angle of incidence  $i = 30^{\circ}$  to the normal as shown in Fig. 4.1. Label the point **F** where the line meets **GH**.

(e)	and	be two pins $P_1$ and $P_2$ on the line <b>FE</b> , placing one pin close to <b>E</b> . Label the positions of $P_1$
(f)	the eye	place the block and observe the images of $P_1$ and $P_2$ through side ${\bf CD}$ of the block so that images of $P_1$ and $P_2$ appear one behind the other. Place two pins $P_3$ and $P_4$ between your and the block so that $P_3$ and $P_4$ , and the images of $P_1$ and $P_2$ seen through the block ear one behind the other. Label the positions of $P_3$ and $P_4$ . Remove the block.
(g)		w a line joining the positions of $P_3$ and $P_4$ . Continue the line until it meets <b>CD</b> and labe point <b>K</b> . Draw the line <b>KE</b> .
(h)	(i)	Measure and record the length <i>a</i> between points <b>F</b> and <b>J</b> .
		a =
	(ii)	Measure and record the length $b$ between points ${\bf F}$ and ${\bf E}$ .
		b =
	(iii)	Measure and record the length $c$ between points ${\bf E}$ and ${\bf K}$ .
		C =
	(iv)	Measure and record the length $d$ between points $\mathbf{M}$ and $\mathbf{K}$ .
		d =
		[2]
(i)	Cal	culate $n$ , the refractive index of the material of the block, using the equation $n = \frac{ac}{bd}$ .
		<i>n</i> =[1]
(j)	Rep	peat steps (d)-(h) but with the angle of incidence $i = 50^{\circ}$ .
		a =
		b =
		c =
		d =
		<i>n</i> =
		[2]
(k)	Sug	gest one precaution that you should take with this experiment to obtain reliable results.

Tie your ray-trace sheet into this Booklet between pages 10 and 11.
